FILLING

SMALL CONTAINER FILLING MACHINE FOR ENDLESS LINER

The **small container filling machine for endless liner** are used in situations, where high active bulks (API) have to be filled, under strict requirements to product and operator protection. With its integrated pressure regulation, the welding or crimping system and the weighing platform, the filling machine is a fully equipped solution for filling products without any contamination. The filling machines are commonly used in combination with a dosing unit and a sampler.

FACTS

YOUR ADVANTAGES

- Containers up to 150 kg can be filled
- Operator-friendly and intuitive operation
- The mobile machine, guarantee a great flexibility and availability
- Control panel and process instruments are mounted on the machine

OPTIONAL FEATURES

- Different type of filling heads for different types of endless liners
- Filling head for transfer bags
- Inertisation and oxygen monitoring
- WIP / CIP-compatible executions
- Cleaning control with valves
- Welding or crimping system to close and separate the endless liner
- Integrated inline-sampler
- Execution with decentralised control panel and process instruments
- Isolator system for containment applications up to OEB 6

INDUSTRIES

AVAILABLE APPROVALS

CONTAINMENT RATING UP TO OEB 5
