CLOSING

## SEMI-AUTOMATIC BAG WELDING MACHINE ISP(V)

The **Semi-Automatic Bag Welding Machines** are used in situations, where bags have to be sealed tight after the filling process. The semi-automatic bag welding machine allows the operator to carry out an easy closing of the bag with impulse sealing or ATEX approved heat-sealing. With the fact that the process can be started with a foot switch, the operator has both hands free to hold and stretch the bag flat. So we can avoid critical folds.

Those Semi-Automatic Bag Welding Machines are commonly used in combination with conveying systems.

### FACTS

#### YOUR ADVANTAGES

- Welding temperatures and times can be adjusted individually based on the current used bag material
- Set of parameters can be saved
- Different welding profiles from 3 mm up to 30 mm
- Special welding profiles such as separating weld seam, shape seams
- Processing of different containers sizes are possible due to the height adjustment of the welding / sealing head
- A minimum of interfaces to the existing infrastructure are necessary (power and pressure supply)
- Easy to clean, no retention areas

#### OPTIONAL FEATURES

- Vacuuming and purging of the container / bag
- Multiple welding seams
- Special welding profiles such as separating welding seam or shape seams
- Cutting function with a perforating knife or thermal cutting for a clean and defined bag end
- Executions as mobile units on foot rolls for a high flexibility and availability
- Additional roller conveyor or conveyor belt to integrate the machine in an existing production line
