CLOSING

## BAG CLOSING MACHINE BV7

The **Bag closing machines BV7** are used in situations, where bags have to be sealed tight and without any operator interventions after the filling process. Based on the requirements the machine can be equipped with a bag pull-up, spreading, vacuuming and purging functions. Those fully automatic welding machines are commonly used in combination with fully automated filling lines and conveying systems.

### FACTS

#### YOUR ADVANTAGES

- Different containers can be handled on the same machine (bag, bag-in-box, bag-in-drum)
- Different bag materials in different sizes can be handled on the same machine
- Process parameter and container type adjustable by means recipe management
- Minimal effort between different container sizes due to the automatic container changeover

#### OPTIONAL FEATURES

- Executions with bag pull-up, spreading, vacuuming and purging function
- Executions with side gusseted bag folding
- Executions with multiple welding seams
- Executions with cutting function with a perforating knife or thermal cutting for a clean and defined bag end
- Executions with suction hood to reduce the product dust in the welding area
